- Demobilization and fire suppression repair plans are being initiated.
- **Resources:** 163 personnel assigned

There are no requests for assistance or unmet needs.

Cal OES Duty Officers are monitoring the situation and will provide updates as they become available.

SITUATION SUMMARY

Air Quality

- Recent dry lightning strikes have caused many small fires in the Six Rivers and Shasta-Trinity National Forest as well as State Responsibility Areas.
- Current weather forecasts show the recent low pressure moving out of the area and replaced by a warming trend with drier weather and moderate to light winds over the area.
- The Saddle Fire, located in the Shasta-Trinity National Forest near the town of Hyampom, continues to produce smoke in nearby communities. At this time, smoke is laying in valleys but may lift and transport to further locations throughout the day. Satellite images show smoke traveled north toward Willow Creek and to the southeast past the Hyampom area.
- In Del Norte County, the Buckskin Fire located near Cave Junction, Oregon is producing smoke impacts in downwind areas southwesterly of the fire. Satellite imagery indicates that Smith River could be in the path of the smoke. Crescent City may also be experiencing smoke from the fire.
- Forecasting smoke impacts can be challenging as smoke can vary widely within just a few miles as Humboldt, Del Norte and Trinity Counties contain mountains, valleys, and a thousand different air flow patterns.
- Further Air Quality information will be provided to the public as updated information becomes available.
- For 24-hour Air Quality Information:
 - NCUAQMD's hotline toll-free at 1-866-BURN-DAY (1-866-287-6329)

WEATHER

WEATHER SYNOPSIS BY REGION:

Northern Region

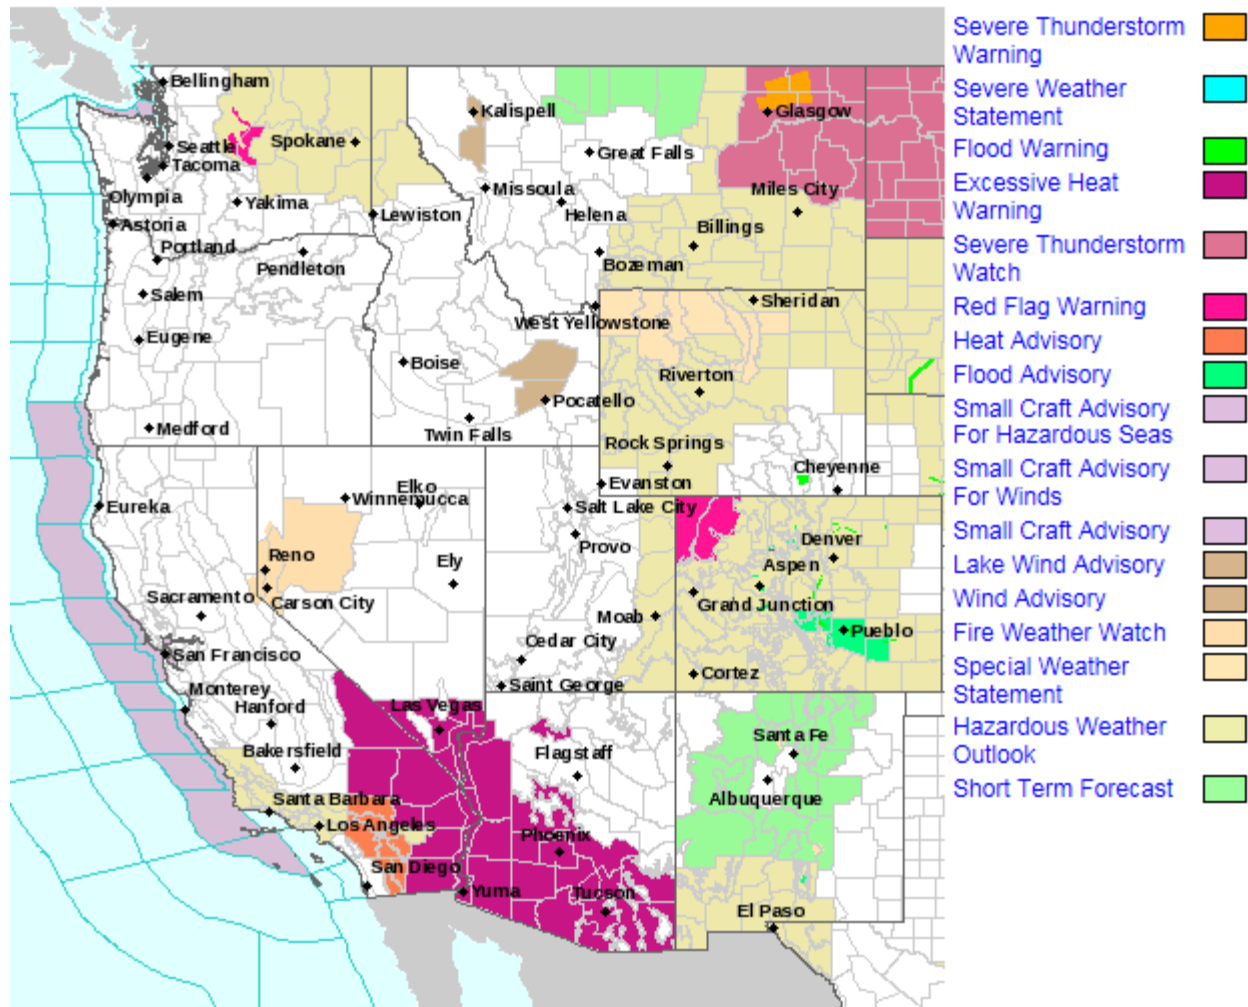

The North Operations area will continue to be sandwiched between low pressure in the Eastern Gulf of Alaska and high pressure over Southern California through Saturday. The resulting southwest to west or onshore flow will keep coastal areas cool and humid, but inland areas and higher elevations will continue to be dry with afternoon temperatures around 8-12 degrees above normal. Areas east of the Cascade-Sierra Crest will see afternoon winds gust to 20-30 mph with relative humidity dropping to 6-12% this afternoon. Winds will be lighter tomorrow. A few cumulus buildups are likely near the Oregon state line this afternoon, but no rain or lightning is expected. An area of low pressure will approach the Pacific Northwest Sunday and Monday and cause an increase in southwest flow over the North Operations area. South-southwest winds will gust to 25-35 mph on Sunday and 20-30 mph on Monday. Temperatures are expected to cool a bit during this time and more afternoon buildups are likely in the far northern end of the region. Dry and warmer weather is expected Tuesday through Friday as the Desert southwest high pushes northward into the North Operations area.

Southern Region

Strong high pressure currently centered over Southern California will maintain hot temperatures and very low humidity away from the coastal areas through this weekend. Maximum temperatures will be in the 80s to low 90s across the mountains, with mid-90s to 105 in the valleys. There will be widespread minimum humidity in the single digits and poor humidity recovery at night above the marine layer. The marine layer will be very shallow, with areas of night and morning low clouds and fog moving inland up to 5 miles from the immediate coast. The area of high pressure will move to the east bringing a gradual cooling trend Monday through the middle of next week. However, inland temperatures will still be a bit above normal. The marine layer will slowly deepen causing morning low clouds and fog to push part way into the coastal valleys. Humidity will increase in the valleys as the marine layer deepens, but widespread single digit minimum humidity is expected to continue over the mountains and deserts. Westerly winds of 15 to 25 mph with gusts to 40 mph will surface across the desert passes through the middle of next week.
